The mud flap that helps pay for itself every time you drive

- **Fuel Savings:** Have you driven down a road only to see a rubber mud flap “sailing” in the air at a 45 degree angle? Conventional rubber flaps create drag on the truck and trailer when the wind hits it. Combined with “anti-sail brackets” the wind resistance is even higher! Using CFD (Computational fluid dynamics) testing on a trailer/tractor combination there was a 0.4% fuel savings with slotted mudflaps. The NRC (Nation Research Council) in Canada in a report commented “Similarly, modest aerodynamic improvements may be achieved with the use of wheel covers and slotted mudflaps.”
- **Weight Savings:** Compare the weight of an Air Pass 24" flap at 3 lbs versus rubber mud flaps that can range from 5 -12 lbs (or more)! On a truck/trailer combination using 4 flaps you could expect at least an 8 lb savings over a 5 lb rubber flap.
- **Payback:** You may initially pay more for the Air Pass flap, but the fuel savings on a typical truck can pay this back in approximately a year.
- **Coverage:** Many flap manufacturers don't even offer a one year warranty. The Air Pass limited lifetime warranty covers normal wear and tear. It does not cover unusual road hazards or back-up situations where the flap is caught under the tire. The warranty applies to original owner only. The Air Pass Mud flaps warranty is a limited lifetime warranty for first owner and original truck. The warranty is not transferable or assignable. It covers any defects in material and also covers any defects in workmanship under normal use. The optional customized logo printing is not included in the lifetime warranty.
- **Using High Quality Materials:** Made from an engineered high impact nylon compound that can withstand harsh, cold climates (-70°C). The flaps will not shatter due to cold weather and can withstand rock impacts that conventional poly flaps cannot.
- **Customize flap with your logo:** Contact your Nu-Line dealer for more information.
